

Mastery of Basic Math Facts

Parents, give your child a “leg up” when school starts in August. Help your child practice these facts everyday so that they become “second nature”. Counting on fingers, using a number line, or even “touch point counting” all help with the initial learning but in the end, it is sheer mastery that gives the students command of this knowledge. **Students should be able to give the correct response in less than a second! Yes, in less than a second!**

Three 15-minute sessions per day would be beneficial.
